Simulation run: Exp. GrowthSens: 0.85; Spec: 0.95

Fit Diagnostics

Log Likelihood/Prior Plot & Metropolis Coupling Acceptance Plot

Gelman-Rubin Convergence Diagnostic

gelman_mpsrf
1.02

Serological Mixing/Prior Diagnostics

IFRs & Incidence Curve

Grey points delineate model fits with Median and 95% Credible Intervals. Blue horizontal line is true simulated value.

Viridis is inferred, Grey Line is Simulated Infection Curve

evalences). N.B. If seroreversion is considered, the true prevalence (green) will also be greater than the observed/inferred prevalences.

Simulation run: Outbreak ControlSens: 0.85; Spec: 0.95
